Organize and streamline inventory placing and fulfilment with **Lite Inventory Management**

Accurate inventory management for internal items is just as important as managing products for external customers. Tracking stock regularly can help avoid stock errors and other associated problems. A better understanding of both availability and demand leads to higher inventory turnover, and full traceability should items need to be recalled.

Lite Inventory Management is an easy to use and intuitive application, delivering stock inventory management functionality with provisions to maintain the re-order points and quantities for stock items. Internal business users request items from a local inventory, and the Inventory Manager issues goods from stock with a few simple clicks. All orders and goods receipts are fully tracked by the system, and any new supplies are automated through your buying and invoicing solution.

Five reasons to use Lite Inventory Management

Smarter stockholding

Keep your inventory levels properly balanced and optimized through intelligent automated re-order points

Improved supplier terms

Use product usage insights as leverage to negotiate better prices and terms with suppliers

Deliver cost savings

Automating manual tasks saves time and decreases labor costs, allowing you to re-allocate resources

Enhanced reporting across the business

Analytics and reports enable you to identify demand for individuals items, track recalled products or expiry dates

Co-ordinate multiple locations

Supports either regional/local stores or allows consolidation of multi- warehouse operations
